What worked well for this assignment

I was able to successfully put together the assignment after a lot of discussion board investigation. All of the code was done by some person at Pearson.

What did not work well for this assignment

I feel like I didn't actually produce anything, which makes me feel like I haven't learned anything tangible. This will probably change now that we have this basis of knowledge down for others.

What did you need help with on this assignment

I needed help with a lot of things, mostly due to of the ambiguousness of the project description. The main issue was that the way Pearson coded their LinkedList is completely different than the way I had learned it, or have ever implemented it.

What did you learn from this assignment

I learned about doxygen. And even though I may not ever use doxygen in real life, I can see the importance of this automated documentation platform. It seems like from what I've see on the apple developer website they use a similar idea.
